

# ALGORITHMS LABORATORY

[CS39001]

## Individual Work

**Lab. No.- 3**

**Date. : 11.08.2025**

Roll Number:	2328145	Branch/Section:	CSSE-1
Name in Capital:	ADARSH UPADHYAY		

### Program No: 3.1

#### Program Title:

Write a program using a user-defined function to calculate the factorial of a given number  $n$ , where  $n$  is taken as input from the user. Before implementing the program, analyze the time complexity of the factorial function using the step count method for at least five different values of  $n$  on paper. After completing the analysis, modify the factorial function by introducing a count variable to track the number of computational steps during execution, as discussed in class. This will help in validating the theoretical step count with the actual implementation.

#### Input/Output Screenshots:

##### RUN-1:

```
KIIT0001@BT08261 MINGW64 ~/Desktop/DAA-Leetcode (main)
$ ./a
Enter n: 4

4! = 24
No. of steps: 11
```

##### RUN-2

```
KIIT0001@BT08261 MINGW64 ~/Desktop/DAA-Leetcode (main)
$ ./a.exe
Enter n: 5

5! = 120
No. of steps: 13
```

## Source

```
8  #include <stdio.h>
9  long int fact(int n);
10 int count = 0;
11 int main(){
12     int n;
13     printf("Enter n: ");
14     scanf("%d", &n);
15     long int fa = fact(n);
16     printf("\n %d! = %ld\n", n, fa);
17     printf("No. of steps: %d\n", count);
18     return 0;
19 }
20 long int fact(int n) {
21     count = 0;
22     long int f = 1;
23     count++;
24     count++;
25
26     for(int i = 1; i <= n; i++,count++) {
27         f *= i;
28         count++;
29     }
30     count++;
31     // printf("Total steps: %d\n", count);
32     return f;
33 }
```

code

### **Conclusion/Observation**

The program successfully calculates the factorial of a number and counts the computational steps, validating the time complexity analysis

## Program No: 3.2

### Program Title:

Write a menu (given as follows) driven program to sort a given set of elements using the Insertion sort method and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.

#### INSERTION SORT MENU

0. Quit

1. n Random numbers=>Array

2. Display the Array

3. Sort the Array in Ascending Order

4. Sort the Array in Descending Order

5. Best Case Time Complexity

6. Worst Case Time Complexity

7. Average Case Time Complexity

8. Time Complexity all Cases (Best, Worst & Average) in Tabular form for values n=5000 to 50000, step=5000

Enter your choice:

If the choice is option 8, then it will display the tabular form as follows:

### Input/Output Screenshots:

#### RUN-1:

```
INSERTION SORT MENU
0. Quit
1. n Random numbers => Array
2. Display the Array
3. Sort the Array in Ascending Order
4. Sort the Array in Descending Order
5. Best Case Time Complexity
6. Worst Case Time Complexity
7. Average Case Time Complexity
8. Time Complexity all Cases (Best, Worst & Average) in Tabular form for values n=5000 to 50000, step=5000
Enter your choice: 1
Enter n: 4
Random array generated.

INSERTION SORT MENU
0. Quit
1. n Random numbers => Array
2. Display the Array
3. Sort the Array in Ascending Order
4. Sort the Array in Descending Order
5. Best Case Time Complexity
6. Worst Case Time Complexity
7. Average Case Time Complexity
8. Time Complexity all Cases (Best, Worst & Average) in Tabular form for values n=5000 to 50000, step=5000
Enter your choice: 6
Worst Case Time Complexity: O(n^2)

INSERTION SORT MENU
0. Quit
1. n Random numbers => Array
2. Display the Array
3. Sort the Array in Ascending Order
4. Sort the Array in Descending Order
5. Best Case Time Complexity
6. Worst Case Time Complexity
7. Average Case Time Complexity
8. Time Complexity all Cases (Best, Worst & Average) in Tabular form for values n=5000 to 50000, step=5000
```

## Source

```

154 }

```

## Conclusion/Observation

This program demonstrates insertion sort, allows performance analysis for different cases, and helps visualize time complexity trends for varying input sizes
